Section 1 : Coding

1. Problem Statement

Kishore is studying data structures, and he is currently working on implementing a binary search tree (BST) and exploring its basic operations. He wants to practice creating a BST, inserting elements into it, and performing a specific operation, which is deleting the minimum element from the tree.

Write a program to help him perform the delete operation.

Input Format

The first line of input consists of an integer N, representing the number of elements Kishore wants to insert into the BST.

The second line consists of N space-separated integers, where each integer represents an element to be inserted into the BST.

Output Format

The output prints the remaining elements of the BST in ascending order (in-order traversal) after deleting the minimum element.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 6
5 3 8 2 4 6
Output: 3 4 5 6 8

Answer

```
// You are using GCC
#include <stdio.h>
#include <stdlib.h>

typedef struct Node {
    int key;
    struct Node* left;
    struct Node* right;
} Node;

Node* newNode(int key) {
    Node* temp = (Node*)malloc(sizeof(Node));
    temp->key = key;
    temp->left = temp->right = NULL;
    return temp;
}

Node* insert(Node* root, int key) {
    if (root == NULL)
        return newNode(key);
    if (key < root->key)
        root->left = insert(root->left, key);
    else
        root->right = insert(root->right, key);
```

```
    return root;
}

Node* deleteMin(Node* root) {
    if (root == NULL)
        return NULL;

    if (root->left == NULL) {
        Node* rightChild = root->right;
        free(root);
        return rightChild;
    }

    root->left = deleteMin(root->left);
    return root;
}

void inorder(Node* root) {
    if (root == NULL)
        return;
    inorder(root->left);
    printf("%d ", root->key);
    inorder(root->right);
}

int main() {
    int N, val;
    scanf("%d", &N);

    Node* root = NULL;
    for (int i = 0; i < N; i++) {
        scanf("%d", &val);
        root = insert(root, val);
    }

    root = deleteMin(root);

    inorder(root);
    printf("\n");

    return 0;
}
```

Status : Correct **Marks : 10/10**

2. Problem Statement

Edward has a Binary Search Tree (BST) and needs to find the k-th largest element in it.

Given the root of the BST and an integer k, help Edward determine the k-th largest element in the tree. If k exceeds the number of nodes in the BST, return an appropriate message.

Input Format

The first line of input consists of integer n, the number of nodes in the BST.

The second line consists of the n elements, separated by space.

The third line consists of the value of k.

Output Format

The output prints the kth largest element in the binary search tree.

For invalid inputs, print "Invalid value of k".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 7
8 4 12 2 6 10 14
1
Output: 14

Answer

```
// You are using GCC
#include <stdio.h>
#include <stdlib.h>
```

```
typedef struct Node {
    int key;
    struct Node* left;
    struct Node* right;
} Node;

Node* newNode(int key) {
    Node* temp = (Node*)malloc(sizeof(Node));
    temp->key = key;
    temp->left = temp->right = NULL;
    return temp;
}

Node* insert(Node* root, int key) {
    if (root == NULL) return newNode(key);
    if (key < root->key)
        root->left = insert(root->left, key);
    else
        root->right = insert(root->right, key);
    return root;
}

void kthLargestUtil(Node* root, int k, int* count, int* result) {
    if (root == NULL || *count >= k)
        return;

    kthLargestUtil(root->right, k, count, result);

    (*count)++;
    if (*count == k) {
        *result = root->key;
        return;
    }

    kthLargestUtil(root->left, k, count, result);
}

int main() {
    int n;
    scanf("%d", &n);

    Node* root = NULL;
```

```
    for (int i = 0; i < n; i++) {
        int val;
        scanf("%d", &val);
        root = insert(root, val);
    }

    int k;
    scanf("%d", &k);

    if (k <= 0) {
        printf("Invalid value of k\n");
        return 0;
    }

    int count = 0;
    int result = -1;

    kthLargestUtil(root, k, &count, &result);

    if (count < k) {
        printf("Invalid value of k\n");
    } else {
        printf("%d\n", result);
    }

    return 0;
}
```

Status : Correct **Marks : 10/10**

3. Problem Statement

Dhruv is working on a project where he needs to implement a Binary Search Tree (BST) data structure and perform various operations on it.

He wants to create a program that allows him to build a BST, traverse it in different orders (inorder, preorder, postorder), and exit the program when needed.

Help Dhruv by designing a program that fulfils his requirements.

Input Format

The first input consists of the choice.

If the choice is 1, enter the number of elements N and the elements inserted into the tree, separated by a space in a new line.

If the choice is 2, print the in-order traversal.

If the choice is 3, print the pre-order traversal.

If the choice is 4, print the post-order traversal.

If the choice is 5, exit.

Output Format

The output prints the results based on the choice.

For choice 1, print "BST with N nodes is ready to use" where N is the number of nodes inserted.

For choice 2, print the in-order traversal of the BST.

For choice 3, print the pre-order traversal of the BST.

For choice 4, print the post-order traversal of the BST.

For choice 5, the program exits.

If the choice is greater than 5, print "Wrong choice".

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1
5
12 78 96 34 55
2
3

4
5
Output: BST with 5 nodes is ready to use
BST Traversal in INORDER
12 34 55 78 96
BST Traversal in PREORDER
12 78 34 55 96
BST Traversal in POSTORDER
55 34 96 78 12

Answer

```
// You are using GCC
#include <stdio.h>
#include <stdlib.h>

typedef struct Node {
    int key;
    struct Node* left;
    struct Node* right;
} Node;

Node* newNode(int key) {
    Node* temp = (Node*)malloc(sizeof(Node));
    temp->key = key;
    temp->left = temp->right = NULL;
    return temp;
}

Node* insert(Node* root, int key) {
    if (root == NULL)
        return newNode(key);
    if (key < root->key)
        root->left = insert(root->left, key);
    else
        root->right = insert(root->right, key);
    return root;
}

void inorder(Node* root) {
    if (root == NULL)
        return;
    inorder(root->left);
```

```
    printf("%d ", root->key);
    inorder(root->right);
}

void preorder(Node* root) {
    if (root == NULL)
        return;
    printf("%d ", root->key);
    preorder(root->left);
    preorder(root->right);
}

    Node* root = NULL;
    int choice;
    int N;

    while (1) {
        scanf("%d", &choice);

        if (choice == 1) {
            if (root != NULL) {
                freeTree(root);
                root = NULL;
            }
            scanf("%d", &N);
```

```
            int val;
            for (int i = 0; i < N; i++) {
                scanf("%d", &val);
                root = insert(root, val);
            }
            printf("BST with %d nodes is ready to use\n", N);
        }
        else if (choice == 2) {
            if (root == NULL) {
                printf("BST Traversal in INORDER\n");
                continue;
            }
            printf("BST Traversal in INORDER\n");
            inorder(root);
            printf("\n");
        }
        else if (choice == 3) {
            if (root == NULL) {
                printf("BST Traversal in PREORDER\n");
                continue;
            }
            printf("BST Traversal in PREORDER\n");
            preorder(root);
            printf("\n");
        }
        else if (choice == 4) {
            if (root == NULL) {
                printf("BST Traversal in POSTORDER\n");
                continue;
            }
            printf("BST Traversal in POSTORDER\n");
            postorder(root);
            printf("\n");
        }
        else if (choice == 5) {
            freeTree(root);
            break;
        }
        else {
            printf("Wrong choice\n");
        }
    }
```

```
    return 0;
}
```
